Skincare, body care and hair care - built to your brief

La Med India develops and manufactures cosmetics for brands that want more than a catalogue copy. Pick a proven base and make it yours, or bring a brief no one else will take on - we specialise in the actives everyone else says no to.

Actives others cannot source

We routinely formulate with ingredients most Indian manufacturers cannot obtain or handle: PDRN / Sodium DNA, human growth factors and conditioned media, exosome and secretome technology, recombinant and multi-pathway peptides, postbiotics, bioferments and advanced encapsulation systems.

Built around your brief

Every ingredient is a preference, not a fixture. Hero actives, textures, fragrance profiles, claims, pack formats and price bands are all developed to your specification - from a tweak on a proven base to a fully bespoke formulation.

Clinically tested, certified manufacturing

Formulations are clinically tested, and production runs in ISO- and GMP-certified facilities with batch-wise quality control and stability testing.

Proven on demanding briefs

Our R&D team has delivered advanced regenerative and biotech briefs for international clients - growth-factor serums, PDRN infusions, enzyme systems and peptide treatments - under strict confidentiality and formulation exclusivity.

One partner, end to end

Custom formulation, private label on proven bases, white-label supply and contract manufacturing of your own formula - with packaging support and regulatory documentation.

Confidentiality by default

NDA's and formulation-exclusivity agreements protect your formula: what we develop for you is released only to you and is never reused for another client.
